Temperature reading microchip

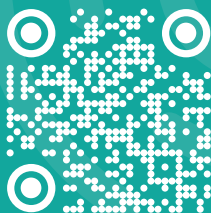

Il The pet microchip complies with ISO 11784/11785 standards.

The syringe is equipped with a lock to prevent an involuntary release of the chip.

The microchip is equipped with a sensor that detects the animal's subcutaneous temperature; thanks to the ELD9265-H reader the microchip number and the temperature are detected simultaneously and the logged data can be transferred to a computer via USB or Bluetooth connection. It is thus possible to take numerous readings of the animal's temperature without causing any stress to the animal itself, checking the trend of any temperatures abnormal and thus provide the veterinarian with the status documented animal health.

Transponder size	12 mm, ø 2,12 mm
Frequency	134,2 KHz
Chip	EM4305
Standard	ISO 11784/85
Syringe color	White, red safety lock
Information on the packaging	Clear chip code and barcode, production and expiration date
Packaging material	Lead-free, non-toxic
Operating temperature	-20 +50 C°
Recording temperature	-40 +70 C°
Language	Italian and others
